Applicant: Keisuke Asami Serial No.: 10/008,448

Filed: December 7, 2001

Page : 2 of 6

For ease of reference, a listing of the claims appears below:

Listing of Claims:

1. (Original) A wavelength tunable light source comprising:

a semiconductor laser in which one of end surfaces is applied an anti-reflection film;

Attorney's Bocket No.: 10830-082001 / A36-

137195M/YS

a lens;

a wavelength selection portion including a diffraction grating and a mirror; and

a motor,

wherein a light beam is emitted from the one of end surfaces;

the lens collimates the light beam;

the wavelength selection portion selects a light beam having desired wavelength from the collimated light beam to return the selected light beam to the semiconductor laser so that laser oscillation occurs;

a center of rotation of the mirror is provided in a position where mode hopping is suppressed when a wavelength in the laser oscillation is tuned, and

rotation of the mirror is driven by a direct drive system by using the motor having a rotation shaft in the center of rotation of the mirror.

- 2. (Original) The wavelength tunable light source according to claim 1, further comprising an optical branching device provided between the semiconductor laser and the diffraction grating for taking out a part of the selected light beam, wherein the light beam taken out by the optical branching device is used as an output light beam.
- 3. (Original) The wavelength tunable light source according to claim 1, further comprising:

Attorney's Locket No.: 10830-082001 / A36-137195M/YS

a rotary arm connected to the rotation shaft of the motor and having a forward end portion to which the mirror is attached; and

a rotation quantity detecting unit for detecting a quantity of rotation of the rotary arm.

4. (Original) The wavelength tunable light source according to claim 1, wherein the motor is a servo-motor containing an encoder.

- 5. (Original) The wavelength tunable light source according to claim 1, wherein the motor is a voice coil motor having torque only in a rotation range which is set in advance.
- 6. (Original) The wavelength tunable light source according to claim 3, wherein wavelength information in wavelength scanning is estimated on a basis of an output signal from the rotation quantity detecting unit.
- 7. (Original) The wavelength tunable light source according to Claim 4, wherein wavelength information in wavelength scanning is estimated on a basis of an output signal from the encoder.
